

Sanad Solutions

Customer Portal Requirements Specification

Version 1.0

Overview .1

The **Customer Portal** is the primary interface between customers and Sanad Solutions. It provides a complete digital workspace where customers can request government and business services, upload documents, monitor request progress, communicate securely with the assigned team, manage payments, and receive AI-powered assistance throughout the .service lifecycle

The customer interacts exclusively with **Sanad**, not directly with the service provider outside .the platform

Dashboard .2

.The existing calendar dashboard should be completely replaced

Welcome Card 2.1

:Display

- Customer Name •
 - (Company Name (if applicable) •
 - Active Requests •
 - Completed Requests •
 - Pending Customer Actions •
 - Latest Activity •
-

Quick Actions 2.2

:Each service should display

- Service Description •
- Requirements •
- Estimated Processing Time •
- Service Fee •
- Frequently Asked Questions •
- Related Services •

:Action Button

Start Service

Create New Request .4

:The request creation workflow should include

- Select Service .1
- Fill Required Information .2
- Upload Required Documents .3
- Review Request .4
- Payment .5
- Generate Request Number .6
- Submit Request .7

My Requests .5

.Display all customer requests

:Supported features

- Search •
- Filter •
- Sorting •
- Export Invoice •

Request Details

:Each request should include

Request Information

- Request Number •
- Service Name •
- Service Provider •
- Assigned Employee •
- SLA •
- Creation Date •
- Estimated Completion Date •

Timeline

.Display every workflow stage

:Example

Request Created

Accepted

Assigned to Employee

Documents Reviewed

Waiting for Nafath Approval

Service Issued

Completed

Progress Bar

.Visual representation of request completion

Current Stage

:Display

- Current Workflow Stage •
- Responsible Employee •
- Next Expected Step •

Documents

:Allow customers to

- Upload Documents •
- Download Documents •
- Preview Documents •

- View Required Documents
 - View Submitted Documents
-

Secure Chat

.Customers can communicate directly with the assigned employee

Communication Policy

:For security and business continuity, the system must automatically detect and remove

- Phone Numbers
- Email Addresses
- Website URLs
- Social Media Accounts
- Any external contact information

.All communication must remain inside the Sanad platform

Buzz Notifications

Employees can send high-priority notifications to customers when immediate action is
.required

:Examples

- .Please approve via Nafath
- .OTP required
- .Missing document
- .Urgent clarification needed

:Buzz notifications should generate

- Push Notification
 - In-App Notification
 - Request Alert Banner
-

Billing

:Display

- Invoice
- Service Fee
- VAT

Payment Status •

Customer Rating

:After request completion, customers can rate

- Assigned Employee •
- Service Provider •
- Processing Speed •
- Communication Quality •
- Overall Experience •

.Comments should also be supported

Document Vault .6

.Provide customers with a personal document repository

:Examples

- National ID •
 - Commercial Registration •
 - Licenses •
 - Contracts •
 - Authorizations •
 - Certificates •
 - Other Official Documents •
-

Features

- Organize Documents •
 - Upload Documents •
 - Replace Documents •
 - Download Documents •
 - Delete Documents •
 - Reuse Documents in Future Requests •
-

Privacy Policy

.The platform distinguishes between two document types

Request Documents

.Documents uploaded specifically for one request

:After the request is completed and confirmed by the customer

- .All request documents are automatically deleted after **48 hours**
- .All request chat messages are permanently deleted
- .All operational files associated with the request are removed

.This ensures customer privacy while reducing storage costs

Personal Document Vault

Customers may optionally keep personal copies inside their Document Vault for future
requests

.Customers may permanently delete these files at any time

Messages .7

.Unified Inbox

.Each request has its own conversation

:Supported content

- Text Messages
- Images
- Documents
- Buzz Notifications

.All conversations must follow the secure communication policy

Notifications .8

:Display all platform notifications, including

- Request Accepted

- Processing Started •
 - Document Requested •
 - Stage Updated •
 - Invoice Generated •
 - Payment Received •
 - Buzz Notification •
 - Request Completed •
-

Billing .9

:Display

- Invoices •
- Payments •
- Refunds •
- VAT •
- Financial History •

.The architecture should be prepared for future Wallet integration

Complaints & Support .10

.Customers can create complaints linked directly to any request

:Complaint information should include

- Complaint Type •
 - Description •
 - Attachments •
 - Priority •
 - Current Status •
 - Resolution Timeline •
-

Sanad AI Assistant .11

Overview

Sanad AI is an intelligent, domain-specific assistant designed for government and business services.

Unlike a generic chatbot, it is powered by a centrally managed **Knowledge Base** maintained by Platform Administrators and enriched with live request data

Objectives

:Sanad AI should

- .Reduce customer support workload
 - .Help customers before purchasing services
 - .Assist customers throughout request execution
 - .Explain government procedures
 - .Answer service-related questions
 - .Improve customer experience
-

Knowledge Base

.The AI knowledge base is fully managed from the Admin Portal

:It includes

- Government Authorities
 - Ministries
 - Services
 - Service Requirements
 - Fees
 - Processing Times
 - Government Regulations
 - Internal Policies
 - Procedures
 - FAQs
 - Common Rejection Reasons
 - Special Cases
 - Government Updates
-

AI Capabilities

Before Request Creation

:Sanad AI should be able to

- .Recommend the appropriate service
 - .Compare similar services
 - .Explain requirements
 - .Estimate processing time
 - .Explain pricing
 - .Answer pre-sales questions
-

During Request Processing

:The AI can

- .Explain the current stage
- .Describe why a request is delayed
- .Inform customers about required actions
- .Explain the next workflow step
- .Answer request status questions

:Examples

”?What is the status of my request“

”?What is required from me now“

”?Why is my request delayed“

After Completion

:The AI can

- .Explain issued documents
 - .Recommend related services
 - .Remind customers about future renewals
 - .Suggest upcoming compliance requirements
-

Intelligent Recommendations

.The AI should proactively notify customers about upcoming business needs

:Examples

- .Your Commercial Registration expires soon

- .Your ZATCA certificate requires renewal
 - .Your municipality license will expire next month
 - .A related service is recommended
-

Intelligent Search

:The AI should search across

- Knowledge Base
 - Customer Requests
 - Request History
 - (Customer Documents (based on permissions
-

Request Summary

:Customers can ask

”.Summarize my request“

:The AI should provide

- Latest Update
 - Current Stage
 - Pending Customer Actions
 - Next Workflow Step
-

Human Handover

If the AI cannot answer confidently, it should seamlessly transfer the conversation to the
.assigned employee or Customer Support team

Supported Languages

- Arabic
- English

.The AI should automatically respond in the customer’s preferred language

Customer Profile .12

:Customers can manage

- Personal Information •
 - Company Information •
 - Addresses •
 - Preferred Language •
 - Notification Preferences •
 - Password •
 - Registered Devices •
 - Security Settings •
-

Security & Privacy .13

:The Customer Portal must implement the following security policies

- .Encrypt all documents in transit and at rest •
 - .Automatically block external contact information in chat •
 - Delete request conversations **48 hours after request completion and customer confirmation** •
 - .Delete all request-specific documents after **48 hours** •
 - .Retain only audit logs and operational metadata for compliance purposes •
 - .Allow customers to download their files before automatic deletion •
 - .Maintain a complete audit trail for all critical actions •
-
